Pile File

Our name, Spiral Drillers Civil, may give the impression that the company only does drilling projects. That was the case in the early years, but a few years ago it was decided that to be a true piling company we needed to diversify into pile driving as well as cast in-situ piling (drilling).

That first pile driver, PD 1200, was a great success and is still one of our most popular machines. It's capable of driving timber, steel or concrete piles of up to 9 metre sections under the hammer.

With a hammer weight of 1200 kg and track mounted, it has an all-upweight of around 15 tonne. It's fully hydraulic with computer control of both the drop height and hammer speed. It is very versatile, easy to transport and set up - the ideal machine for residential or commercial projects.

In the last newsletter we had a feature and photo of our M-Trak micro piling rig. Well, how's this? Our Pin Pile Driver!

This micro rig is small enough to be taken inside a building or basement with as little as 2.4 metres head height and fits through standard 750mm doorways. We can also take it to difficult access sites or lift it by

crane or helicopter to remote sites. It's operated by an hydraulic power pack which can be set up outside a building thus eliminating the risk of fumes.

The **King of Pile Drivers** is our crane mounted leader with an hydraulic 6000kg hammer. It is supported by our Kobelco 55T crawler crane and can drive piles up to 22 metres long. It's the machine for those large jobs, bridges or large commercial projects.
