

# Spiral Drillers

"We know the Drill" CIVIL

Issue No. 3 May 2008

## Pile File

How often do we call a company to get advice or to request a price and we form a mental picture of the person we are chatting to. I am sure so many of you have done that when you have asked to speak to our estimator / quantity surveyor.

Doug is a very friendly person and you don't need to be chatting to him for very long before you feel that he has come to grips with your request and in fact have become more a friend than a customer.

Doug has only been with Spiral Drillers Civil since late 2007, but due to a long career in the civil construction and building industry he has quickly adapted to the piling industry, so you can be confident that he will take a personal interest in your project.

INTRODUCING OUR ESTIMATOR  
"DOUG IRVINE"

*It is not because things are difficult that we do not dare;  
It is because we do not dare that they are difficult.*

## Deep and Large

Drilling a 2600mm diameter access shaft for a micro tunneling machine in the middle of a road. This Soilmec drilling rig is capable of drilling up to 3,600mm diameter and 40 metres deep.

*We can not change the direction of the wind,  
but we can change the set of our sails.*

# Deep and Square

Access shaft constructed of drilled and placed or driven steel universal columns and excavated for micro tunneling or pipeline repairs.

*"I skimmed a little on the foundations, I should have called **SPIRAL DRILLERS** but no one will ever know it".*

*Experience is not what happens to a man.  
It is what a man does with what happens to him.*
